WILDCAT-DRILLING SUCCESS

~ Epithermal-style gold mineralization as [North Nevada Rift crosses Cortez trend](#) ~

To NuLegacy shareholders/stakeholders:

Hi Folks,

[+ To view today's new release](#)

Hole VIO17-01, which is over four kilometers east of the Iceberg gold deposits, returned 33.5 meters (110 feet) of 0.65 grams/t gold and 5.5 grams/t silver starting at 99.2 meters and includes, 9.1 meters (30 feet) of 1.8 grams/t gold and 17.6 grams/t silver. In the process, it discovered what appears to be an epithermal gold system, an entirely different deposit type to that of our Carlin-style gold deposits.

The application of our '[old school/new school](#)' science by our dynamic exploration team and the resulting 2017 summer wildcat drilling program (65% of the 2017 35,000 ft./40 hole drilling program dedicated to exploring for prospective deposits) has been a resounding success," said NuLegacy's Chairman, Albert Matter, "To date we have added the Avocado, Deep Iceberg, Western Slope, Serena and VIO prospects to our original complement of the North, South and Central Iceberg gold deposits. We now have over ten square km of gold mineralization in the [central mineralized zone](#) of the Red Hill property".

Thank you and Cheers,

Albert

Albert J. Matter
