NEW DRILL TARGETS IN THE ICEBERG

~ Successful geophysical surveys ~

To NuLegacy shareholders/stakeholders:

Good morning Folks,

+ [To view today's news release](#)

Today's news release reports that the recently completed **geophysical surveys** over the Iceberg gold deposit indicate the possibility of a **deeper** horizon of gold mineralization. It is located beneath the current near-surface deposits of the North and Central zones of the Iceberg!

Forty years ago, when the famed Canadian geologist Dr. N.B. Keevil Sr., (founder of Teck Corporation, whom I was fortunate to know) first championed the beginnings of the science of geo-physics, many of his colleagues scoffed and slurred it as 'geo-phantasy'.

As the good Dr. Keevil said then, "it's an infant science that will depend on the integrity of the users to grow." Grown it has indeed and contributed to numerous discoveries over the years.

NuLegacy's Chief Geoscience Officer, Dr. Roger Steininger, and his associate Mr. Derick Unger (our Chief Geologist) are both strong proponents of geo-physics.

They successfully used it to locate the Avocado 'anomaly' which was recently drilled and confirmed as the second gold deposit on our property. Now they have identified a 'deep' IP anomaly under the near-surface Iceberg gold deposit which we will drill in the spring 2017.

Thank you all,

Cheers,

Albert

Albert J. Matter
