EXPANDING THE SERENA ZONE

~ 3.27 grams/ton gold over 15.2 meters~

To NuLegacy shareholders/stakeholders:

Hi Folks,

[Click to view today's new release](#)

Things are heating up in the Serena zone as reported in the linked news release.

The assay from SR18-01C, the first of seven holes drilled to date (five in the Serena-North zones, two in the Avocado zone) is an excellent interval of 3.27 grams/ton over 15.2 meters (within 51.1 meters of 1.47 grams/ton) and demonstrates that the Serena-North zones have:

- Good to excellent grades, good thickness and are showing good continuity,
- Are open in several directions with the important northwest 'orientation', and,
- That the newly developed geological model is working well having been used to site this drill hole location.

Our analysis suggests that we may have several such targets in the two km Avocado-Serena gap shown [here](#).

A description of the model's targeting methodology is presented at the following link:

All the best to you and cheers,

Albert

Albert J. Matter
