

- **2017-2018: Under the guidance of Charles Weakly, NuLegacy executed major geochemical, geophysical and ‘wildcat’ drilling programs.**
- **Resulting in the ‘breakthrough’ analysis confirming the structural and stratigraphic connectors between the Barrick’s Goldrush/Fourmile Carlin gold systems and NuLegacy’s Red Hill Carlin gold systems which are:**
  - **On trend.**
  - **Strongly mineralized systems with the same stratigraphy.**
  - **The high-grade gold is at the structural confluence of:**
    1. **the high-angle faults and,**
    2. **low-angle thrust faults,**
    3. **within the Wenban5 stratigraphic horizon.**
- **2019-2020 objectives: Capitalize on the geologic ‘breakthrough’ by:**
  - **Testing the connectors.**
  - **Priority targets are the Fourmile ‘Look-alike’ and the Rift Anticline.**
