

- **Three new** highly prospective targets in 4.5 km wide by 6 km long (N-S) Rift zone.
- **Hole WS18-01**, 3,900 ft. step-out west of Serena confirmed **major** part of Red Hill's Carlin-style gold systems under post-mineralized basalt flows in elevated Rift zone (reported Feb 11, 2019).
- Numerous 'high-grade' spikes (i.e. Serena18-02c with 22.1 m of 6.59 g/t, incl. **8.7 m of 16.92 g/t gold**) indicate high-grade core/feeder zones likely 'lurking' to the west³.
- Iceberg – the up-dip modest grade mineralized 'exhaust' plume from North Nevada Rift target zone mineralization.
